WENJIA ZHAI

(402) 890-4973 | zhai.we@husky.neu.edu | https://www.linkedin.com/in/wenjia-zhai/

KILLS

- **Programming Language:** Python, Scala, Java, R, Perl
- **Programming Frameworks & Tools:** TensorFlow, PyTorch, scikit-learn, NLTK, spaCy, Gensim, Regular Expression, Spark, SQLite, MongoDB, Bash Scripting, Git, Google Cloud Platform
- **Data Science Skills:** Data Mining, Feature Engineering, Natural Language Processing, Data Visualization
- **Machine Learning Algorithms:** Neural Network, K-nearest Neighbors, Linear & Logistic Regression, Naïve Bayes, Support Vector Machine, Random Forest, Clustering
- **Operating System:** Windows, Linux/Unix (MacOS, Ubuntu)
- **Report Writing:** Microsoft Office (Word, Excel, PowerPoint), LaTeX, Markdown, Jupyter Notebook
- **Language:** Chinese, English

WORK EXPERIENCE

Internship: Python Artificial Intelligence Engineer — Beijing, China
Huike Group — Sep – Dec 2019

Rationality: The company wanted to design a program to automatically segment the videos and labeled each segment by its topic

- Segmented videos based on the length of silence period
- Built auto speech recognition system (ASR) using **CTC**, **CNN** and **Attention** algorithms, converted audios into texts from videos using **TensorFlow**
- Conducted **TextRank** model to extract topic of each piece of videos

Achievement: The model achieved 62.6% voice recognition accuracy compared to transcript on 20 videos, 89.2% segmentation accuracy compared to manual segmentation on same videos

ACADEMIC PROJECT

LendingClub Loan Records Analysis in Spark — Boston, MA — Feb 2020

- Constructed a **Spark** data pipeline in **Scala**
- Deployed the pipeline on **Google Cloud Platform**, managed by **Airflow**
- Loaded 2 million of loan and rejection records using **Dataproc** service
- Aggregated rejections and collections records, output a json file containing result

News with Similar Opinions in News in Python — Boston, MA — July 2019

- Parsed ~1000 news articles from mainstream news website
- Built a **Word2Vec** model to find the similar words of “say” to locate opinions in news.
- Captured and extracted opinions based on the location of “say”
- Conducted a **Doc2Vec** model for **Latent Semantic Analysis** using **Gensim**, obtained the articles with most similar opinions

Article summarization Generator in Python — Boston, MA
Team Leader — Feb 2019

- Preprocessed article contents and (optional) titles (tokenizing, converting to lower case, stemming, removing stop words)
- Counted appearances of each word as word weights
- Adjusted word weights by multiplying frequency of words in content and title
- Calculated the weights of each sentences based on frequency of words
- picked 1/3 sentences with heaviest weights as article summarization
- created an API for this application

EDUCATION

Northeastern University, GPA: 4.0/4.0 — Boston, MA
M.S. in Bioinformatics — May 2020

Coursework: Bioinformatics, Statistics, Algorithms, Data Mining, Data Visualization, Machine Learning, Neural Network, Natural Language Processing, Linguistics

University of Nebraska – Lincoln Lincoln, NE
M.S. in chemical Biology May 2017
Coursework: Organic Chemistry, Organic Reaction, Chemical Biology, Biochemistry, Analytical Chemistry

China Pharmaceutical University Nanjing, China
B.S. in pharmaceutical Chemistry July 2011
Coursework: Inorganic Chemistry, Organic Chemistry, Analytical Chemistry, Physical Chemistry, Anatomy, Physiology, Pharmacology, pharmacognosy, Pharmaceutical Chemistry, Spectrum
